Holtsville, NY 11741, USA Conan O'Brien may be leaving the network he made his own, but in his absence, he's left a legacy of hilarious, unapologetic comedy at the top of the news and entertainment universe. The TBS star's last show, Conan Does Conan, ended on Wednesday

night, but the comedian's return to NBC (which begins in earnest on Thursday) is already generating buzz, and the unapologetic enthusiasm continues. "I'm excited for the chance to relive his glory days," said Fallon, adding that the most memorable Conan moments were "the things that stick with you most." What's New in the?

AutoCAD 2023 introduces a completely new automatic mechanism that can intelligently mark up your drawings for you and notify you when the objects you want are on the wrong plane and need to be moved. This new feature – Markup Assist – is built into a new application, Automatic Markup. Automatic Markup can now be used for importing printed paper or PDFs, just like any other text object. It can mark up your paper before you export to the drawing as a PDF. And it can also indicate when you have a complex geometry on the wrong plane and can help you move it or move the drawing to the correct one. It will mark up the part that is wrong as well as the rest of the drawing for you. Moreover, it can tell you when something is hidden and is not

visible, and when you have objects that are collapsed that need to be expanded, and when you need to fix a group that you accidentally collapsed or are accidentally locked. In addition to marking up your drawing for you, AutoCAD 2023 introduces a new class called MarkupAssist : this object automatically marks up your drawing for you when it recognizes certain types of content. These are the same annotations that can be applied to drawings using the existing Markup tool. You can also create your own MarkupAssist objects in your drawings using a new tool. These are objects that do not mark up your drawings, but you can apply to them the same annotations that you can apply to drawings using the existing Markup tool. A new class, Markup, is available in the Markup tool. You can use this to mark up drawings using the standard annotations, as well as the annotations that can be applied to MarkupAssist objects. Revised Insert Object dialogs: You can now search in Insert Object dialogs for objects by name, description, category, or parent. These

objects will also be inserted at the bottom of the dialog, rather than just after the first object that you selected. The last object selected in a dialog is always highlighted. If you select the first object in a dialog, the first object is now highlighted instead of the last object. You can use this as a visual guide for selecting the first object in the dialog. You can edit the sequence of objects that are inserted using the Edit object drop-down menu. You can use this to either insert all objects in the order that they appear, or to insert
