In this tutorial I'm going to show you how to make a game jam game similar to Idle Legends. The game you see on the screen is called Idle Legends. If you want to learn how to make a game like this or have questions let me know in the comments or by a Facebook message. I have explained the code in detail in this comment box. You can use any language to make a game jam game. So if you use a language other than Python, you have to change the code according to your language. Sorry for the bad quality, this is my first video, I am using Xbox One and I'm not familiar with editing. Any questions? Let me know. (See the readme.txt for more information)A sheep in wolf's clothing? The Fraser Institute's Fiscal Facts and Stats numbers are so skewed that they're hard to believe. Except that they're not. I've been watching the Fraser Institute's annual reports for many years and I have to admit that they're one of the most biased organizations in Canada. Last week, I attended the Institute's Fiscal Summit at the Vancouver Convention Centre. Then, I returned home and found that the Fraser Institute's annual reports were still under review. The Fraser Institute's research on the banking bailout states: "To date, the federal government has spent only $15.5 million on the bailouts..." Really? In 2010, the federal government paid $8.8 billion to the Royal Bank of Canada in order to bail it out. The figure for the Bank of Montreal is more than $8.2 billion and for the Toronto-Dominion Bank, more than $8.5 billion. How does the Fraser Institute get away with this? If you visit their website, you'll see they do not have an index for borrowers. Could that be because the Fraser Institute did not have an interest in paying for them? The Fraser Institute claims that personal insolvency rates doubled in the last year, from 3.9 per cent in 2009 to 8.2 per cent last year. That number includes bankruptcy, and actually, it's the number for "Chapter 7," meaning liquidation, at 13.4 per cent. Does this mean that the debtors were collectively bankrupted by insolvency? Only 30 per cent of all bankruptcies in Canada are for Chapter 7. The rest are Chapter 11, 10 per cent, or Chapter 13, another 10 per cent. The overall number of insolvencies was about 40 per cent, with 30 per cent not qualifying for bankruptcy and then there are 10 per cent that took a deal with the trustee to repay their creditors in a Chapter 13. So, there are only 10 per c9d1549cdd

Thanks to: Richard Treadgold for inspiring this one and helping me with advice! A: It's called the "spiritual menu." The spirit menu or spiritual menu is a variant of the normal game controls, which lets the player perform special moves by using spiritual attacks. They are considered to be illegal moves in normal battle, since their use consumes the player's special energy; however, they are legal in spiritual battle. The most common spiritual attack is called "daimoku no nai sai", meaning "praying for one's health". The micro-world -- and not the macroeconomy -- will set the pace for world trade growth in the coming decades. That is the conclusion of a newly released McKinsey Global Institute study that used trade data from 72 countries to analyze how trade between the world's largest economies is expected to grow over the next 10 years. The study made no assumptions about whether countries will borrow and spend and spend and borrow, or about whether they will use their new economic strength to help the poor or the citizens of their own countries. "Our real economy will remain challenging in the years ahead. Trade is not going to pick up," said McKinsey's KPMG economist Carola Madsen. "We still have a long way to go in the restructuring of economies, and we have made little progress in creating a system where good jobs and high wages can be secured for all citizens. Yet the positive trends in the reduction of poverty and in inclusion continue. And with the much lower trade barriers in many emerging economies, the new opportunities for trade integration will play a critical role in helping to close the skill and income gaps in advanced countries. That is why we see that trade will be an important driver for growth for emerging market economies. " The study is the most extensive and detailed look at the economic impacts of trade in the future yet undertaken by McKinsey. It also takes into account the views of more than 140 academic, government, and industry experts across the globe, many of them trade economists who have worked in both the public and private sectors. The study's central finding is that economic integration will be a key driver of growth for a variety of emerging markets, and that the vast majority of them will gain from this economic integration. The fact that global trade is growing faster today than it did previously and that more developing economies are exporting and importing indicates that the trade environment is improving. In the future, however, trade growth will be driven by

/ PCI-Express Gen3 X79-based open platform desktop computer-- Fri, 05/08/2020 Headline, image, article, or section synopsis should be unique to APH Networks. Plagarism of a full article will be rejected without warning. By APH Networks staff Since 2009, when tech behemoth Intel developed an open-standardized platform, Intel's x86 platform has been the defacto standard platform for high performance desktop computing. Using the x86 architecture to design high-performance CPUs, chipsets, and PC motherboards, the x86 platform ushered in a golden era of engineering excellence. But recently, another powerhouse tech company, AMD, has started the x86 revolution once again with the release of the Ryzen 3000 series CPUs. Although AMD has been an x86 archrival of Intel's for much of the past couple decades, the Ryzen CPUs this time out have some really nice features that change the architectural game. Is the AMD x86 revolution the start of a new golden age for high-end PCs? Is the x86 revolution truly back on? Can Ryzen 3000 Be The Catalyst For An AMD Backlash? In 2019, AMD more-or-less kept pace with Intel's 28 core, 128 thread, Core i9 series; but with the launch of the AMD Ryzen 3000 series CPUs, it has finally found a way to go toe-to-toe against Intel's Core i9 series for overall performance, and Ryzen 3000 has actually won the performance race more often than not. Why is this PC building hardware like an engineer? Why do we not just concentrate on the performance and cut the crap? Do we want to overclock the machine? Do we need to use an SLI machine? Which PCIe slot/cable do we need to swap out, motherboard or GPU? Do we need 400w, 450w or 500w power supplies? The question is, do we want our PC building experience to be an engineering lecture, or a fun, friendly conversation in a forum thread? Do we want to be scrutinizing every minute performance tweak, or do we just want to have a fun time? So many factors determine what size motherboard you will get, and which CPU sockets you will use. And then at the end of the day, we know what we want. But why should you have to do the work of figuring it all out? The technologies that have made AMD thrive in the past decade have caused

Phoenix Point is an early access 4x turn-based tactical game set during the third World War. Recruit soldiers, manage supply lines, and confront enemy forces with a tactical layer that is easy to learn but difficult to master. Make fateful decisions and eke out victory in battles that can either mean glory or defeat. Key Features: – 4x turn-based gameplay – Phoenix Point offers a fully-featured tactical layer for your modulated action game. Live the relentless battle for control of the map while trying to avoid being overwhelmed by the sheer number of enemies. – Player-driven strategy – Manage supplies and research projects to build the perfect war machine. Use your strategic plan to your advantage and guide your troops to victory. – Huge strategic scope – Every battle will take place on a unique map, played out over several turns. – Loads of tactical depth – Every battle can end differently, so learn how to use your cybernetics to your advantage. – Hidden war machine blueprints – A war machine blueprint will exist in almost every campaign mission. Many enemies will reveal one during the mission. – More things to do than you can do them – Complete research projects, manage your supply lines, look for upgrades, and strategize with your allies. – Broad appeal – Phoenix Point is a turn-based, reflex-driven, strategic wargame designed for a casual audience. Play through a campaign mission, or jump right into the chaos of battle. Some Early Feedback: – Linux support added. – War machine repair UI updated. – Repair costs are now separated by unit type. – AI can start more research projects. – Failed war machine research projects report back to the player. – New map icons. – New company page background. – Features new logo. – Gamepad support added. – Bugfix is fixed. Become the best empire the world has ever seen. The future is ours to take, so make it count! With Rise of Imperium, Phoenix Point is here to shake the foundations of the 4x genre. Our first expansion for the game adds a new strategic layer and opens up new possibilities for your modulated action game. Unlock and upgrade hundreds of war machines across three distinct factions, and recruit your army with new factions and units, including unique cybernetic augmentations. In the distant year 2017, there are two things that could radically alter life on Earth: mankind'
